

Defensive Portfolio

Factsheet as per 28/02/2025

Strategy

The defensive portfolio invests primarily in bonds and near-money-market instruments. With a view to risk spreading, equities are added up to a maximum level of 20% of the portfolio. In addition, no more than 20% of alternative investments (such as hedge funds, absolute return funds, real estate,

commodities, private equity) may be added. Currently, the above categories of investment are implemented by way of investment funds and funds-of-funds (including own products). Investing in individual titles within these categories is not excluded. The potential limits of the various investment

categories are either fully exploited or adjusted, in line with the given market situation. The investment objective is achieving a return that is at least above that of an alternative investment. The recommended holding period is at least three years.

Our Philosophy

One of the core competences of Wiener Privatbank is customised wealth management. We see it as our mission to select the most adequate wealth management strategy for you and with you. Our expertise, our ability to professionally manage your portfolio and

provide an in-depth analysis of your personal risk profile make us the ideal partner for your asset planning. Making the right investment decisions and monitoring your portfolio are tasks you can entrust to our asset management experts.

Risk information

- You should be aware of the fact that the prices of financial instruments, including, without limitation, investment funds and ETFs, may rise as well as fall.
- Other risks such as market risk, equity price risk, counterparty risk, country risk and valuation risk may apply as well.
- We cannot guarantee preservation of the capital invested.
- For more information concerning risks, please consult your account manager or read the Important Client Information (Austrian Securities Supervision Act of 2018).

Sustainability aspects in portfolio management

How sustainability risks are incorporated into investment decisions and the impact of sustainable risks on returns. Sustainability risks have no impact on returns and investment decisions in Wiener Privatbank's portfolio management.

The assessment of sustainability risks of the portfolio management of Wiener Privatbank led to the conclusion that there are currently no sustainability risks considered relevant for this financial product due to the diversification through the selection and weighting of the individual funds.

Depending on the investment strategy selected for portfolio management, the sustainability risks may vary. A separate sustainable investment strategy is not currently offered.

How adverse sustainability impacts are taken into account at the level of the financial instrument. The investments underlying this financial product do not take into account the EU criteria for environmentally sustainable economic activities."

Due to the size and the specific business model of Wiener Privatbank SE as a niche player and the associated limited business activities, principal adverse sustainability impacts are currently not taken into account. From Wiener Privatbank SE's point of view, there is currently not enough data from issuers/product manufacturers available that would allow a corresponding reliable assessment. For this reason, Wiener Privatbank SE is currently refraining from such disclosure. However, as soon as sufficient harmonized and thus comparable data and information is available, Wiener Privatbank SE will examine principal adverse sustainability impacts as part of the product governance process and disclose its findings.
